

# Provider Notice

**From:** Magellan Healthcare

**Subject:** Upcoming revisions to the Person-Centered Services Plan (PCSP) template in P-CIS

## Overview

Magellan is implementing a series of updates to the Person-Centered Services Plan (PCSP) template in P-CIS designed to:

- Improve clarity
- Better align with person-centered planning practices
- Eliminate unnecessary documentation
- Ensure required information is captured consistently

## Summary of updates

### Section name changes

- Crisis Plan will become Crisis and Safety Plan
- Needs and Objectives will become Individualized Plan
- Action Steps will become Strategies and Action Steps
- Transition to Adulthood will become Transitions

### Sections being reorganized or expanded

- **Crisis and Safety Plan**  
Expanded to include history and background, warning signs, triggers, proactive strategies, reactive strategies, recovery, and additional notes.
- **Individualized Plan**  
Reorganized to more clearly link identified needs, youth and family voice, outcome statements, and timelines.
- **Strategies and Action Steps**  
Expanded to emphasize who will do what and by when, and to support equitable participation across the team.
- **Transitions**  
Previously this section was limited to transition planning toward adulthood; it will now also include planning for transitions to different levels of care for youth of any age.

### Sections being moved

- Plan of Care Information will move toward the beginning of the form.
- Transitions will move toward the end of the form.

- Ground Rules and Preferences will no longer appear as a standalone section and will be incorporated into the Team Summary.

#### **Conditional display (skip logic)**

- Wraparound-specific sections will display only when applicable.
- Sections specific to non-Wraparound plans will display only when applicable.
- Selecting Initial Crisis Plan will disable all sections except Crisis and Safety Plan and Signature.

#### **Reduced required fields**

To reduce administrative tasks, several sections will include fewer required fields. Examples:

- Medication sections will require only the medication name and prescriber name.
- Many fields will be optional or conditionally required based upon other selections.

### **Next steps**

- These updates will be implemented in P-CIS on July 21, 2026.
- Prior to completing Person-Centered Services Planning, be sure you have completed the [on-demand PCSP training](#).
  - The password for the training is **Idaho Training**.
